KTO KARATAY UNIVERSITY
FACULTY OF HEALTH SCIENCES
NURSING PROGRAM
LABORATORY PRACTICE DIRECTIVE

The Faculty of Health Sciences at KTO Karatay University aims to educate professional clinical nurses equipped with fundamental competencies. Therefore, the laboratory and clinical practice rules, in line with the knowledge and skills that students are expected to develop through the courses offered, are set out as follows.

1. Students must wear appropriate attire required for each laboratory session (such as a laboratory coat, gloves, protective goggles, etc.).

2. Students must demonstrate conduct appropriate to the laboratory environment in terms of behavior, attire, and discipline. Students who fail to exhibit appropriate conduct will be given a warning; if the behavior does not change, the student will be asked to leave the laboratory and will be considered as not having participated in the practical session on that day.

3. **Students who arrive at the laboratory more than five minutes late** will not be admitted to the practice session and will be considered as not having completed the practical training on that day.

4. Participation in laboratory practice **is mandatory.** For valid reasons and with the approval of the course coordinator, a student may be absent for a maximum of two days. However, it is the student's responsibility to inform the course coordinator in advance. In cases where absenteeism exceeds two days, the student is required to submit a medical report, which must be approved by the school administration. All absences must be compensated by the student within the framework of the make-up program determined by the school.

5. Eating and drinking are strictly prohibited in the laboratory.

6. Mobile phones must be switched off during laboratory practice sessions.

7. Reports and/or assignments related to laboratory practice must be submitted on the date and time specified by the course coordinator.

8. After the laboratory practice, each student is responsible for cleaning the materials they have used and returning them to their designated place or handing them over to the laboratory assistant.

9. Laboratory practice consists of activities such as the submission of assignments/reports and the completion of checklists.

10. Laboratory practice contributes to the course passing grade.

LABORATORY PRACTICE DIRECTIVE

Method

- A scenario related to the subject is prepared by the instructor.
- The scenario is distributed to students in written form prior to the practice session.
- The scenario is first demonstrated to the students as an example by the instructor.
- In line with the scenario, students perform the practice under the guidance of the instructor.
- Students are evaluated based on skill assessment forms prepared by the instructor for the relevant skill.
