KTO KARATAY UNIVERSITY FACULTY OF HEALTH SCIENCES

DEPARTMENT OF NURSING, GRADUATE SATISFACTION SURVEY RESULTS

1: Strongly Disagree

2: Disagree

3: Neutral

4: Agree

5: Strongly Agree

A total of 54 graduates, predominantly working as nurses in various hospital institutions, participated in the KTO Karatay University Faculty of Health Sciences Department of Nursing Graduate Satisfaction Survey Form. Of the graduates, 72.2% reported working in a field related to their profession, 46.3% had been working for 0–1 year, and 40.7% stated that they were employed in public institutions. Additionally, 44.4% of the graduates indicated that they graduated in 2023, and 33.3% reported that 1–6 months had passed between graduation and starting their first job. Furthermore, among 16 graduates working outside the sector, 81.3% stated that this was due to their own personal preference.

Regarding the evaluation of the educational process, 33.3% of the graduates were neutral about whether the education provided by the department contributed to their employment, and 38.9% were undecided about the adequacy of internships and/or practical courses in the curriculum. Moreover, 33.3% agreed that the facilities provided during their education were sufficient, 35.2% agreed that internships and/or practical training enabled them to start their professional lives with more experience, 38.9% agreed that the education met their expectations, and 37% agreed that they would recommend the department to prospective students. In addition, 46.3% strongly agreed that they could communicate with the department whenever needed, 37% strongly agreed that the education they received provided the knowledge and skills required by the sector, and 46.3% strongly agreed that the department’s education contributed to their personal development (such as building social and professional relationships, problem-solving, generating new ideas, synthesizing, and interpreting).
